

[matrix] based school messenger

Schulchat *RLP*

Schulchat RLP

WWW

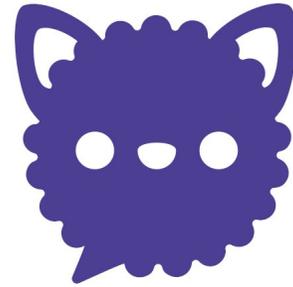

Android

IOS

Project context

Fork of FluffyChat and Synapse

Project context

- Communication Platform for elementary up to vocational schools
- Target group: teachers, students, parents and school management
- Customer: Department of Education of the German state of Rhineland-Palatinate
- Name origin: Schulchat RLP —> **R**hein**L**and-**P**falz

Customization

- Educational adaptations:
 - Addressbook
 - Integrity condition
 - Communication Matrix
 - Dealing with abuse: reporting function
 - School Features (Simplifying the recovery key process, active read receipts, PDF-Preview, Poll-Survey Feature)
- Bildungsportal Integration
- Make it scalable for up to half a million users

Organisationsadministratoren können auf dieser Seite die Kommunikation zwischen verschiedenen Rollen im Schulchat RLP aktivieren und deaktivieren.

Bitte nehmen Sie Änderungen nur in direkter Rücksprache und bei Zustimmung der Schulleitung vor. Dies gilt insbesondere bei der Freigabe der Schüler-zu-Schüler Kommunikation.

Die Einstellungen haben keinen Effekt auf schon bestehende Chaträume.

1. Zeichnen Sie:

$$a = \begin{pmatrix} 2 \\ 2 \end{pmatrix}, b = \begin{pmatrix} -3 \\ 4 \end{pmatrix}, c = \begin{pmatrix} 5 \\ -1 \end{pmatrix}$$

$$a + b = \begin{pmatrix} -1 \\ 6 \end{pmatrix}, b + c = \begin{pmatrix} 2 \\ 3 \end{pmatrix}$$

$$\begin{aligned} a + b &= \begin{pmatrix} 2 \\ 2 \end{pmatrix} + \begin{pmatrix} -3 \\ 4 \end{pmatrix} = \\ & \begin{pmatrix} 2 + (-3) \\ 2 + 4 \end{pmatrix} = \begin{pmatrix} -1 \\ 6 \end{pmatrix} \end{aligned}$$

Bildungsportal Integration

- User/Room provisioning

- Interval-based
- Incremental

- Addressbook

OneRoster API Schools

```
Schools (/schools):
{
  "orgs": [
    {
      "sourcedId": "DE-TE-ENABLED-30000",
      "status": "active",
      "dateLastModified": "2022-09-19T11:27:19.000000Z",
      "identifier": "30000",
      "name": "GY Trier",
      "type": "school",
      "metadata": {
        "enabledServices": ["4c2a7910-2170-403b-adff-700ae1c39eca"]
      }
    }
  ]
}
```

OneRoster API Users

```
Users (/schools/{id}/users):
{
  "users": [
    {
      "sourcedId": "uuid-user-1",
      "status": "active",
      "dateLastModified": "2023-08-31T18:48:27.000000Z",
      "username": "keine.freischaltung",
      "enabled": true,
      "givenName": "Keine",
      "familyName": "Freischaltung",
      "role": "teacher",
      "orgs": [{"href": "DE-TE-ENABLED-30000", "type": "org"}]
    }
  ]
}
```

OneRoster API Classes

```
Classes (/schools/{id}/classes):
{
  "classes": [
    {
      "sourcedId": "uuid-class-1",
      "status": "active",
      "dateLastModified": "2022-09-13T10:31:33.000000Z",
      "title": "7a (2022/2023)",
      "classType": "homeroom",
      "school": {"href": "DE-TE-ENABLED-30000", "type": "org"}
    }
  ]
}
```

OneRoster API Enrollments

```
Enrollments (/schools/{id}/enrollments):  
{  
  "enrollments": [  
    {  
      "sourcedId": "DE-TE-ENABLED-30000,uuid-class-1,uuid-user-1",  
      "status": "active",  
      "dateLastModified": "2022-09-22T14:35:56.000000Z",  
      "role": "student",  
      "user": {"href": "uuid-user-1", "type": "user"},  
      "class": {"href": "uuid-class-1", "type": "class"},  
      "school": {"href": "DE-TE-ENABLED-30000", "type": "org"}  
    }  
  ]  
}
```

IDM Provisioner

- **User-Provisioning**

- OneRoster user ID becomes a Matrix user ID

- **Room-Provisioning**

- Create Room: POST `_matrix/client/v3/createRoom`
- IDM-Bot:
 - Add User: POST `_synapse/admin/v1/join/${roomId}`
 - Kick User: POST `_matrix/client/r0/rooms/${roomId}/kick`

Invite Group Example

- 1) User creates a room
- 2) User invites a group within the addressbook -> then a join rule is set -> the room alias is created based on the school name and the group id:

```
#${school}--${groupId}:${domain}'
```

- 3) Synapse checks the join rule event
- 4) Next IDM sync -> IDM Bot invites users according to the join rule

IDM Provisioner

```
{
  "type": "m.room.join_rules",
  "content": {
    "join_rule": "restricted",
    "allow": [
      {
        "type": "m.room_membership",
        "room_id": "#school123--class5a:domain"
      },
      {
        "type": "m.room_membership",
        "room_id": "#schule123--teachergroup:domain"
      }
    ]
  }
}
```

Infrastructure / kubernetes

- Why k8s?
 - FOSS
 - Container orchestration
 - Extensible and flexible
 - Declarative
 - Scalable
 - Large ecosystem

Fairkoms k8s Infra

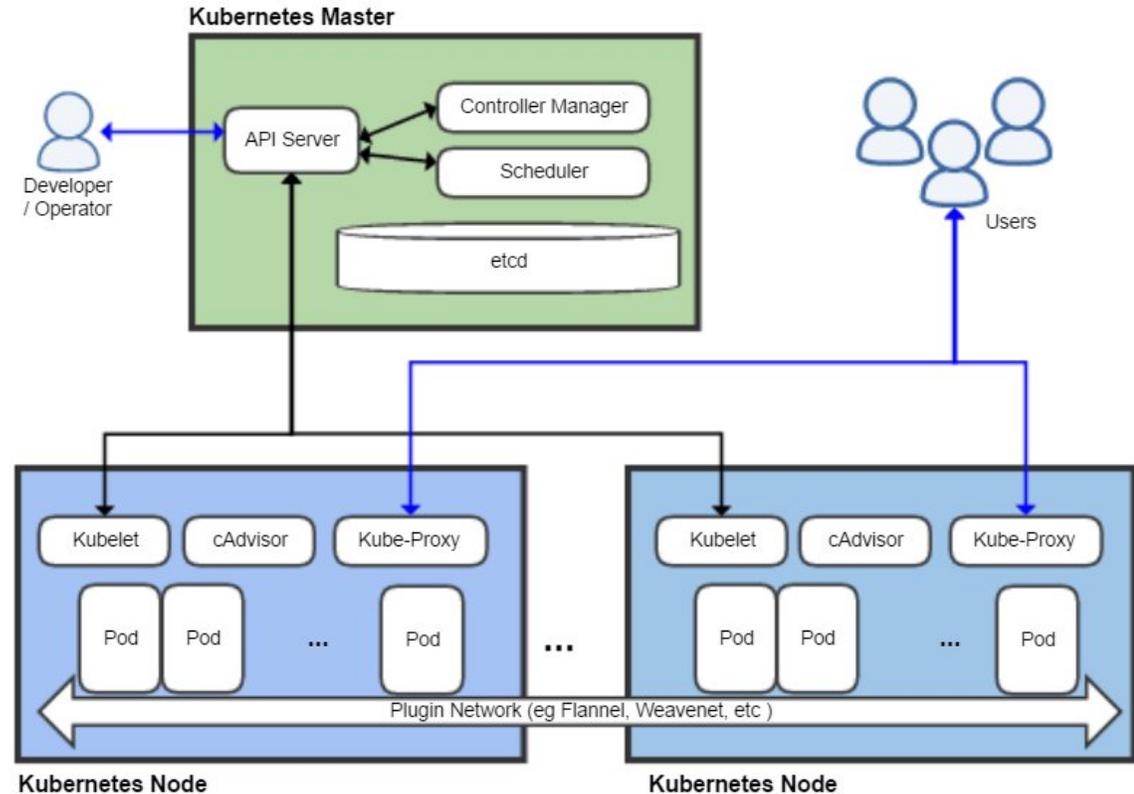

- Baremetal
- Debian, k3s
- Hetzner

kubernetes

K8s basics

- Controlplane:
 - api server
 - scheduler
 - controller
 - etcd
- All k8s nodes:
 - kubelet
 - kube proxy
 - container runtime

K8s extensions

- DNS: CoreDNS
- CNI: Cilium
- Metrics
- Logging
- Operators
 - Rook.io (ceph storage)
 - Postgres (acid zalando)
 - Vault (Hashicorp, OpenBAU)

Our own k8s clusters

- k8s Distributions
 - k3s: simple, lightweight, single binary
 - rke2: full compliant k8s with bells and whistles
- Storage:
 - ceph: distributed platform for block, file, object
 - longhorn: simple block storage

Matrix Deployment

- Kustomize instead of Helm Chart
 - base + overlay
- Distributed Synapse Workers
 - Generic DP + specialised SF
 - Ingress paths
 - internal k8s (service/dns, pod name)
 - Event persistence, media repository, typing, presence, receipts..

Challenges / Storage

- Storage
 - Large VolumeMounts (media-store)
 - Linux mount + recursive chown/chmod under the hood

```
securityContext:  
  runAsUser: 1000  
  runAsGroup: 3000  
  fsGroup: 2000  
  fsGroupChangePolicy: "OnRootMismatch"
```

Challenges / Data Migration

- Kubectl cp?
 - Is just tar piping under the hood
- Rsync?
 - Sequential, single threaded

```
kubectl exec -it <pod_id> \  
  tar -C /precious/files \  
    --create \  
    --listed-incremental=/path/to/backupIndex \  
    -vv \  
    --file=- . \  
| tar -xvf - /precious/backups
```

```
parallel -j 16 --eta rsync -aPhv {} destination/ ::: Downloads/*
```

- Use fast storage (within k8s cluster) as cache
- Split up into many tar files:

```
tar -cvp -f - /path/to/directory | split -b SIZE --numeric-suffixes - OUTPUT_PREFIX
```

Thank you!
